Peptide with binding affinity for Src homology region 3 (SH3) domains proteins - useful for e.g. modulating signal transduction pathways at cellular level, esp. protein tyrosine kinase-mediated. the

WPI;

Disclosure; Page 62; 116pp; English.

AAW11128 represents a preferred core sequence of a set of peptides that bind to the Src SH3 domain. The SH3 binding peptides are useful in modulating signal transduction pathways at the cellular level (especially protein tyrosine kinase-mediated), modulating oncogenic protein activity, or providing compounds for the development of drugs with the ability to modulate broad classes, as well as specific classes, of proteins involved in signal transduction and also for regulating the processing, translation of RNA. Conjugates of the peptides with detectable labels or imaging agents are useful for imaging cells, tissues and organs in which Src or Src-related proteins are expressed

                                                                                                                                                                                                                                                                         AAW17010 is the consensus sequence of a set of SRC SH3-binding peptides derived from a biased peptide library, exhibiting selective SH3 binding. SH3 binding peptides are useful in modulating signal transduction pathways at the cellular level (especially protein tyrosine kinase-mediated), modulating oncogenic protein activity, or providing compounds for the development of drugs with the ability to modulate broad classes, as well as specific classes, of proteins involved in signal transduction and also for regulating the processing, trafficking or translation of RNA. Conjugates of the peptides with detectable labels or imaging agents are useful for imaging cells, tissues and organs in which Src or Src-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Src; SH3; Src homology region 3; binding affinity; oncogenic protein;

                                                                                                                                                   á
                                                                                                                                                                                                                                                                 The present sequence represents a Src homology region 3 (SH3) binding CC peptide consensus motif. SH3 binding peptides are selected from: (a) CC peptides which bind the SH3 domain of Cortactin; (b) peptides which bind CC the middle SH3 domain of Nck; (c) peptides which bind the SH3 domain of Src; (e) peptides which bind CC Abl; (d) peptides which bind the SH3 domain of Src; (e) peptides which CC bind the SH3 domain of PiC gamma; (f) peptides which bind the SH3 domain of Crk; (h) peptides which bind the SH3 domain of Src; (e) peptides which bind the SH3 domain of Crk; (n) peptides which bind the SH3 domain of Src; (e) peptides which bind the sH3 domain of Src; (e) peptides which CC can be used in the method to identify inhibitors of their binding to CC their respective SH3 domains, which could be used to modulate the CC pharmacological activity of proteins or polypeptide containing the SH3 domain. The peptides can also be used to activate Src or Src-related CC protein tyrosine kinases, to stimulate the immune response by increasing CC and interleukin-1, or to deliver a conjugated molecule to certain CC cellular compartments containing Src or Src related proteins
                                                                                                                                                                                  Best Loc

The apparatus detects specific binding between a first member immobilised on an electrode and a second member which is biologically labelled, in the presence of an electrochemical mediator. The method may be used for performing binding and competitive binding assays. It may be used in performing high throughput screening assays for detecting inhibition of specific binding between the members of the binding pair for use in drug development, biochemical analyses and protein purification assays. The present sequence is an example of a peptide which is used in labelled form as a second binding member in the above assay. The peptide acts as a surrogate ligand for the the first member. Specifically, the peptide is a proline-rich peptide which binds with Src SH3 domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     p3, and p4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombostis, or autoimmune diseases. The use of an PC domain (rather than a Pab domain) can provide a longer half-life or incorporate functions such as FC receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes composition of matter (1) comprising Fc domain, pharmacologically active peptides, and linkers. Where (1) (X1)a-F1-(X2)b, where: F1 = an Fc domain, X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, (L2)d-P2-(L3)e-P3-(L4)f-P4 where P1,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel composition of matter comprising an Fc domain and pha
active peptides, useful for treating cancer and autoimmune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents an Src SH3 region binding peptide. The invention cc relates to an apparatus for performing an electrochemical assay for cdetecting binding between members of a biological binding pair. The apparatus has: a first electrode (comprising a conducting or conducting surface); a second, reference electrode (comprising a conducting metal in contact with an aqueous electrolyte solution); and a cc third, auxiliary electrode; where each electrode is connected to a cc potentiostat and is in contact with an electrolyte solution containing both members of a biological binding pair. The second member of the cc binding pair is electrochemically labeled with a chemical species capable of participating in a reduction/oxidation reaction at the surface of the cfirst electrode under conditions where an electrical potential is applied to the electrical potential is applied to the apparatus when an cc electrical potential is applied to the electrodes, and the current is reduced upon binding of the second member of the biological binding pair to the first member of the pair. The method can be used for to the first member of the pair. The method can be used for conditions a means for rapid, high throughput screening of biologically active

The present invention describes a vehicle-peptide molecule (I) or its multimers. (I) can have antiinflammatory, antitumour, immunosuppressive, cytostatic, antitheumatic, antiarthritic, antidiabetic, ophthalmological, antidanaemic, anorectic, antiinfertility, haemostatic, dermatological and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TNF-alpha inhibitor; interleukin 1 antagonist; TL-1 antagonist; TMP; TPO mimetic peptide; EPO mimetic peptide; EMP; VEGF antagonist; MMP inhibitor; antiinflammatory; antitumour; immunosuppressive; cytostatic; antirheumatic; antiarthritic; antidiabetic; ophthalmologicantianaemic; anorectic; antiinfertility; haemostatic; dermatological; neuroprotective; inflammatory disease; autoimmune disease; tumour groy cancer; rheumatoid arthritis; diabetic retinopathy; infertility; obessleep disorder; neurological degenerative disease; anaemia; thrombocytopaenia; metastatic tumour; systemic lupus erythematosus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides methods and peptides for use in identifying modulators of the cAMP-specific phosphodiesterase isoform PDE4D5. These act by modulating the interaction of PDE4D5 with the receptor for activated C-kinase (RACKI). The modulators are useful in treatment of various conditions
                                                                                                                                                                                                                         Novel vehicle-peptide molecule or its inflammatory and autoimmune diseases,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC neuroprotective activities. (I) can be used as a therapeutic or CC diagnosing diseases characterised by dysfunction of their associated CC protein of interest, for identifying normal or abnormal proteins of CC interest, as a part of diagnostic kit to detect the presence of their CC proteins of interest, in a biological sample. Additionally, (I) is useful CC for treating inflammatory and autoimmune diseases, tumour growth, cancer, CC remematoid arthritis, diabetic retinopathy, obesity, sleep disorders, CC mimetic compounds are useful for treating disorders characterised by low CC red blood cell levels such as anaemia. The TPO-mimetic comprising CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet CC deficiency, such as thrombocytopaenia, spistemic lupus erythematosus, CC and Fanconi's syndrome. Novel vehicle-peptide molecule or its multimers useful for treating inflammatory and autoimmune diseases, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders and infertility.

Claim 39; Page 61; 176pp; English

invention describes a vehicle-peptide molecule (I) or its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            prophylactic agent as well as for screening purposes. (I) is useful for diagnosing diseases characterised by dysfunction of their associated protein of interest, for identifying normal or abnormal proteins of interest, for identifying normal or abnormal proteins of interest in a biological sample. Additionally, (I) is useful proteins of interest in a biological sample. Additionally, (I) is useful for treating inflammatory and autoimmune diseases, tumour growth, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders, confinetic compounds are useful for treating disorders characterised by low cred blood cell levels such as anaemia. The TPO-mimetic comprising compounds are useful for treating disorders characterised by low compounds are useful for treating disorders characterised by low compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful in thrombocytopaenia, aplastic anaemia, metastatic cander fanconi's syndrome. AbB72403 to AbB73426 and AbB135695 to AbB135777 compounds and anaemia and nucleic acid sequences used in the compounds compounds and anaemia invention of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC This invention relates to novel mammalian CDR mimetibodies, specific CC portions or variants thereof. Specifically, it refers to an antibody CC fragment where a protein has been inserted into, or replaces a portion CC of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which CC itself comprises at least one human framework region and at least one CC ligand binding region (LBR). The present invention describes human CC mimetibodies, including modified immunoglobulins and cleavage products CC that can be useful in gene therapy and the generation of transgenic CC plants and animals. Furthermore, the CDR mimetibody is useful for CC preparing compositions for modulating, treating or reducing the symptoms CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator, CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This CC mimetibody of the invention.

                                                                                                                                                                             This invention relates to CH1 deleted mimetibodies (and the DNA second them), compositions, methods and uses. The invention ruseful for the development of compounds with an immunosuppressive, cardiovascular, cardiant, hypotensive, neuroprotective, nootropic, antibacterial, virucide or fungicide activity. In addition, the discondination of the discond
antibacterial, virucide or fungicide activity. In addition, the discloss sequences may prove useful for gene therapy. The CH1-deleted mimetibody is useful for diagnosing or treating a disease condition in a cell, tissue, organ or animal, specifically for modulating, treating, alleviating, preventing the incidence or reducing the symptoms of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New CH1-deleted mimetibody polypeptides and nucleic acids, useful modulating, treating, alleviating, preventing an immune, cardiovas or neurodegenerative disease or disorder, anemia, cancer, or infec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CH1 deleted mimetibody; immunosuppressive; cardiovascular; cardiant; hypotensive; neuroprotective; nootropic; antibacterial; virucide; fungicide; gene therapy; immune disorder; cardiovascular disease; arrhythmia; hypertension; heart failure; neurodespenerative; multiple sclerosis; dementia; Alzheimer's disease; anaemia; cancerous condition; infectious disease; bacterial infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and/or neurologic diseases, as well as anaemia. Accordingly, they exhibit immunomodulator, cardiant, antimicrobial, cytostatic and neuroprotective activities. This peptide sequence is an SH3 antagonist peptide sequence used to make a mimetibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           28-JUN-2002; 2002US-0392431P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
This invention relates to CH1 deleted mimetibodies (and the DNA sequences which encode them), compositions, methods and uses. The invention may be useful for the development of compounds with an immunosuppressive, cardiovascular, cardiant, hypotensive, neuroprotective, nootropic, antibacterial, virucide or fungicide activity. In addition, the disclosed sequences may prove useful for gene therapy. The CH1-deleted mimetibody is useful for diagnosing or treating a disease condition in a cell, tissue, organ or animal, specifically for modulating, treating, alleviating, preventing the incidence or reducing the symptoms of an immune, cardiovascular (for example arrhythmia, hypertension or heart failure), or neurodegenerative (for example multiple sclerosis, dementia or Alzheimer's disease) diseases or disorders, anaemia, cancerous
                                                                                                                                                                                                                                                                                                                      WPI;
                                                                                                                                                                                                                                                      New CH1-deleted mimetibody polypeptides and nucleic acids, useful for modulating, treating, alleviating, preventing an immune, cardiovasculor neurodegenerative disease or disorder, anemia, cancer, or infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      fungicide; gene therapy; immune disorder; cardiovascular di

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      or Alzheimer's disease) diseases or disorders, anaemia, cancerous conditions, or infectious diseases (for example bacterial, viral cfungal infection). The present sequence is that of a peptide which used during the creation of a mimetibody of the invention.
                                                                                                                                                                                                          Claim 3;

This invention relates to CH1 deleted mimetibodies (and the DNA sequences which encode them), compositions, methods and uses. The invention may be useful for the development of compounds with an osteopathic, cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen, gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic, immunomodulator, antiallergic, muscular-Gen, cytostatic, antiinflammatory, neuroleptic, ophthalmological, nephrotropic or

                                                                                                                                                                                                                                                                        respiratory-den activity acting as a tumour necrosis factor (TNF)-modulator or cytokine-agonist. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with abstrant expression or activity of the CHI deleted mimetibody, such as a bone or joint, cardiovascular, dental or oral, dermatological, ear, nose or throat, endocrine, metabolic, gastrointestinal, gynaecological, hepatic, obstetric, haematologic, immunological, allergic, infectious, musculoskeletal, oncological, neurological, nutritional, ophthalmologic, pediatric, psychiatric, renal or pulmonary disorders. The present sequence is that of a peptide which may be used during the creation of a mimeribody of the invention

                                                                                                                                                                                                                                                              PTM: The soluble form derives from the membrane form by proteolytic processing (By similarity).
SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                       Immunol. 38:581-586(2002).

PUNCTION: Cytokine that binds to TNFRSF6/FAS, a receptor that transduces the apoptotic signal into cells. May be involved in cytotoxic T cell mediated apoptosis and in T cell development. TNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TNFRSF6B/DcR3 modulates its effects (By similarity).

SUBUNIT: Homotrimer (Probable).
                                                                                                                                                                                                                                                                                                                                                             SUBCELLULAR LOCATION: Type II similarity).
